Top 10 science and technology stories of 2014

In 2014, Lawrence Livermore National Laboratory (LLNL) built on a 62-year tradition of translating basic science into technologies that ensure national security, address pressing real world problems and expand the boundaries of fundamental science.

The top stories of the year are a reflection of the Laboratory's ability to apply its core national security competencies to a broad set of rapidly evolving national and global challenges, including: energy, climate change, biodefense and detection, forensic science, high performance computing and materials science.

The capabilities developed and applied to this research, such as high performance computing (HPC) and additive manufacturing, also serve to enhance the nation's economic vitality and global competitiveness.

Because evaluating the long-term impact of recent scientific developments on a field of study or science in general is difficult at best, the following advances are not listed in order of scientific importance. These represent only a sampling of the science and technology produced at Lawrence Livermore during the 2014 calendar year.

1 The National Ignition Facility, the world's largest and most energetic laser, reached a major "fuel gain" milestone critical to ignition, the "holy grail" of inertial confinement fusion science. Ignition is the process of releasing fusion energy equal to or greater than the amount of energy used to confine the fuel. [Read more](#)

2 World renowned for its High Performance Computing (HPC) capabilities, Lawrence Livermore announced a contract with IBM to bring Sierra, a next-generation supercomputer to the Lab. HPC is critical to LLNL's national security

mission as well as to addressing other national and global challenges such as energy and climate change. [Read more](#) LLNL's Sequoia supercomputer was ranked No. 1 on the Graph500 list, a measure of a system's ability to perform data analytics, released at the 2014 Supercomputing Conference on Nov. 18. [Read more](#)

3 Mark Hart, a scientist and engineer in Lawrence Livermore's Defense Technologies Division, was awarded the 2015 Surety Transformation Initiative (STI) Award from the National Nuclear Security

Engineering Directorate's chief scientist Jim Candy has made a significant impact on Lawrence Livermore in his four decades of groundbreaking research.

NOTE

[Blue links](#) are accessible on both the internal and external Lab Web network.

Administration's (NNSA) Enhanced Surety Program for developing a code all but impossible to crack.

[Read more](#)

4 The Department of Defense's Defense Advanced Research Projects Agency (DARPA) awarded Lawrence Livermore up to \$2.5 million to develop an implantable neural device with the ability to record and stimulate neurons within the brain to help restore memory. [Read more](#) In directly related research, scientists are developing an electrode array technology for monitoring brain activity as part of a collaborative research project with UC San Francisco to better understand how the neural circuitry of the brain works during memory retrieval.

[Read more](#)

5 A biological detection technology developed by Lawrence Livermore scientists can detect bacterial pathogens in the wounds of U.S. soldiers that have previously been missed by other technologies. This advance may, in time, allow an improvement in how soldiers' wounds are treated. [Read more](#)

6 Lawrence Livermore researchers announced development of an efficient method to measure residual stress in metal parts produced by powder-bed fusion additive manufacturing. This 3D printing process produces metal parts layer by layer using a high-energy laser beam to fuse metal powder particles. [Read more](#)

7 A microbe detection array technology developed by LLNL scientists could provide a new rapid method for public health authorities to conduct

“ Quotables

I've never worked a day in my life, I love what I do. My job is just plain fun.

– Engineering Directorate's chief scientist Jim Candy, on whether he plans to retire soon

surveillance for emerging viral diseases. [Read more](#)

8 LLNL researchers have developed a material that is 10 times stronger and stiffer than traditional aerogels of the same density. This ultralow-density, ultrahigh surface area bulk material with an interconnected nanotubular makeup could be used in catalysis, energy storage and conversion, thermal insulation, shock energy absorption and high energy density physics. [Read more](#)

9 A team of Livermore scientists are using mini-satellites to help control traffic in space. The scientists used a series of six images over a 60-hour period taken from a ground-based satellite to prove that it is possible to refine the orbit of another satellite in low Earth orbit. [Read more](#)

10 Using satellite observations and a large suite of climate models, Lawrence Livermore scientists have found that long-term ocean warming in the

The interior of the target chamber at the National Ignition Facility at Lawrence Livermore National Laboratory. The object entering from the left is the target positioner, on which a millimeter-scale target is mounted. Researchers recently used NIF to study the interior state of giant planets.

NOTE

[Blue links](#) are accessible on both the internal and external Lab Web network.

upper 700 meters of Southern Hemisphere oceans has likely been underestimated. [Read more](#) In another climate research development, Livermore scientists joined forces with eight other labs and the National Center for Atmospheric Research to use high performance computing to create the most complete climate and Earth system models designed to address the most challenging climate change issues. [Read more](#)

Additional research worthy of mention, and garnering international attention, includes LLNL research published about planetary formation. Livermore scientists for the first time experimentally re-created the conditions that exist deep inside giant planets, such as Jupiter, Uranus and many of the planets recently discovered outside of our solar system. [Read more](#)

Quotables

A lot of engineering capabilities, while they have a huge impact on the Lab's mission space, are largely unknown outside of our square mile. It's very important to get the word out about our one-of-a-kind expertise.

— Anantha Krishnan
in an all-hands address to Engineering

A month-by-month recap of 2014 events at Lawrence Livermore

Lawrence Livermore's Newsline month-by-month highlights from 2014 are listed on the following pages. Listings are in four categories: Science and technology; People; Operations; and Recognition and awards. This 2014 Year-in-Review appears only electronically; there is no print edition. The Web-based format offers the advantage of providing links to the referenced Newsline articles, press releases or the LLNL Report.

JANUARY 2014

Science & technology

Space weathering, a process similar to geological erosion on the Earth, produces water in the rims of tiny particles of interplanetary dust. The discovery may have implications on the origins of life and sources of water throughout the galaxy. [Read more](#)

Lawrence Livermore chemist Sarah Baker and engineer Josh Stolaroff examine an enzyme that they plan to use as a catalyst to convert methane to liquid fuel.

A team of LLNL scientists are using mini-satellites that help control traffic in space. The scientists use a series of six images over a 60-hour period taken from a ground-based satellite to prove that it is possible to refine the orbit of another satellite in low Earth orbit.

[Read more](#)

Lab researchers discover an important source of decoherence noise affecting the usability of superconducting circuits as quantum bits (qubits) for quantum computers. Increasing coherence time in superconducting circuits for use as qubits is an active area of research in the quest to create a practical scalable quantum computer. [Read more](#)

In an effort to put to good use natural gas (methane) that might otherwise become pollution, LLNL collaborates with start-up company Calysta Energy on a new technology to convert natural gas to liquid fuel.

[Read more](#)

The world's most advanced instrument for directly imaging and analyzing planets orbiting around other stars is pointing skyward and collecting light from distant worlds. For the past decade, LLNL has led a multi-institutional team in the design, engineering, building and optimization of the instrument, called the Gemini Planet Imager.

[Read more](#)

LLNL researchers begin to develop a technique that provides a practical approach for looking into the complex physical and chemical processes that occur

“ Quotables

With this technology, we would have a small portable reactor that would convert natural gas to a liquid fuel. The liquid is much more valuable, and transportable, than natural gas in its gaseous form. If the technology works well, it could give the United States a new option for using our large reserves of natural gas.

– LLNL engineer Joshua Stolaroff, who co-leads the project with chemist Sarah Baker

during fallout formation following a nuclear detonation.

[Read more](#)

A team of LLNL scientists conduct a study of the phase stability of vanadium metal (a hard, silvery gray, ductile and malleable transition metal) and vanadium-chromium alloys at high temperatures and pressures.

[Read more](#)

Using deep sea corals gathered near the Hawaiian Islands, an LLNL scientist, in collaboration with UC Santa Cruz colleagues, determines that a long-term shift in nitrogen content in the Pacific Ocean has occurred as a result of climate change. The researchers look to ancient corals as a timekeeper for the changes in ocean chemistry. [Read more](#)

NOTE

[Yellow links](#) are accessible on the Lab's internal Web network only.

[Blue links](#) are accessible on both the internal and external Lab Web network.

Patrice Turchi will become the 2014 vice president of The Minerals, Metals & Materials Society in February. His research focuses on computational materials science and condensed matter physics. Turchi will ascend to president in 2015.

NOTE

[Yellow links](#) are accessible on the Lab's internal Web network only.
[Blue links](#) are accessible on both the internal and external Lab Web network.

A team of scientists from LLNL, the University of Minnesota and Ohio State University develop a novel geothermal power plant design that leverages unwanted, captured carbon dioxide to boost both output and efficiency compared to conventional geothermal plants. [Read more](#)

People

Trish Damkroger, LLNL deputy associate director for Computation, is named one of the "People to Watch" in High Performance Computing (HPC) for 2014 by *HPCWire*, the online news service covering supercomputing. Damkroger was the chair for the Supercomputing Conference 2014. [Read more](#)

Patrice Turchi, a Distinguished Member of the Technical Staff at LLNL, will be installed as the 2014 vice president of The Minerals, Metals & Materials Society (TMS) in February. Turchi is the group leader of LLNL's Condensed Matter and Materials Division of the Physical and Life Sciences Directorate. [Read more](#)

Lab employee Alicia Williams develops technology to strengthen America's security and build homes to provide low-income families with affordable housing. Williams is a Habitat for Humanity volunteer who spends her Saturdays laboring on rooftops, where she installs siding, nails in frames and puts in decks to build inexpensive homes in the Bay Area, an expensive region. [Read more](#)

LaDoris "Dot" Harris, director of the Department of Energy's Office of Economic Impact and Diversity,

“ Quotables

I was drawn to the organization because I think the cost of good housing is a huge challenge for many working families. Plus, I get to do some work with my hands, which is a refreshing change from spending the day on the computer.

– Lab mechanical engineer Alicia Williams, who volunteers with Habitat for Humanity

evokes the legacy of Martin Luther King Jr. to encourage LLNL employees to champion diversity.

[Read more](#)

Four engineers from LLNL's Engineering Directorate attend a specialized certificate program at the Massachusetts Institute of Technology to develop high-level systems engineering skills and knowledge.

[Read more](#)

Operations

Starting in February 2014, the envelopes used to exchange dosimeters have a new look. Instead of one envelope being used both to receive and return your dosimeter, the new system will use two envelopes, with a smaller return envelope being provided inside a larger envelope. [Read more](#)

The High Repetition-Rate Advanced Petawatt Laser System, or HAPLS, is being designed, developed, assembled and tested at Lawrence Livermore. It will be transferred to the ELI Beamlines facility in 2016, where it will be commissioned for use by the international scientific community.

NOTE

[Yellow links](#) are accessible on the Lab's internal Web network only.
[Blue links](#) are accessible on both the internal and external Lab Web network.

Sandia California will relocate visitor badging operations from Vasco/East Avenue and the General Access Area/Livermore Valley Open Campus badge desk in Bldg. 903, to the kiosk known as Post 17, near the Combustion Research Facility. [Read more](#)

Gov. Jerry Brown announces a state of emergency for drought conditions and asks Californians to voluntarily reduce water use by 20 percent, stating: "We're facing perhaps the worst drought that California has ever seen since records began being kept about 100 years ago." [Read more](#)

The Director's Office reminds all employees of the Lab's existing policies and procedures regarding interactions with federal agency and congressional offices. Acting Director Brett Knapp issues a memo to Laboratory senior members along with a copy of the Lab's policy. [Read more](#)

The Search Committee for the next director of LLNL meets to hear input from former Lab directors, employee focus groups and the Livermore Field Office manager. [Read more](#)

The current LLNL National Security Leadership Fellows return from Texas A&M University where they attended a series of events at the Bush School of Government and Public Service that included a breakfast meeting with Lt. Gen. Brent Scowcroft, USAF (Ret.). [Read more](#)

“ Quotables

It is important that we respond to this historic California drought in a way that is significant, protects the Lab's investment in landscaping and establishes a long-term path forward.

— Mark Martinez,
principal associate director of O&B

FEBRUARY 2014

Science & technology

Using the Lab's supercomputing facilities, a team of researchers simulates the interaction between an intense laser and a solid aluminum target, and discovers an important role of the part of the laser light reflected from the surface. The research is featured on the cover of the Dec. 13, 2013 issue of *Physical Review Letters*. [Read more](#)

LLNL awards a major subcontract to FEMTOLASERS Produktions GmbH (based in Vienna, Austria) as part of the construction of a revolutionary high-power laser system for the European ELI-Beamlines science facility in the Czech Republic. LLNL is constructing the "High Repetition-Rate Advanced Petawatt Laser System" for the ELI-Beamlines facility. [Read more](#)

This DNA molecule is wrapped twice around a histone octamer, the major structural protein of chromosomes. New studies show they play a role in preserving biological memory when cells divide. Image courtesy of Memorial University of Newfoundland.

[Blue links](#) are accessible on both the internal and external Lab Web network.

An LLNL physicist and his colleagues find a new application for the tools and mathematics typically used in physics to help solve problems in biology.

[Read more](#)

Demonstrating the controlled fusing of hydrogen isotopes deuterium and tritium, such that more energy is produced than is used to create the fusions, is one of the stated goals of the National Ignition Facility (NIF). Two papers publish Feb. 5 in *Physical Review Letters* describing the "high-foot" series of experiments begun in spring 2013, which bring NIF closer to achieving this goal. [Read more](#)

An international team of researchers, including scientists from LLNL, demonstrate a new method for studying the structure of proteins that could lead to important advances in biology and other fields. [Read more](#)

At the 58th Annual Biophysical Society Meeting in San Francisco, Geoffrey Feld, an LLNL postdoctoral researcher, describes his work to uncover the secrets of the bacterium *Francisella tularensis*, which causes tularemia, also known as "rabbit fever." [Read more](#)

For the first time, an international team of astrophysicists, including LLNL scientists, unravel how stars blow up in supernovae explosions. [Read more](#)

Though ignition remains the ultimate goal, the milestone of achieving fuel gains greater than 1 is reached at the National Ignition Facility (NIF) for the first time ever on any facility. LLNL scientists detail a series of experiments on NIF that show an order of magnitude improvement in yield performance over

“ Quotables

What we've essentially done is produce the first two frames of a molecular movie showing photosystem II, one of the most important biomolecules involved in photosynthesis, in action.

– LLNL physicist Matthias Frank

past experiments. [Read more](#)

Representatives from government, industry, research institutions and academia in the United States and Brazil meet at the Laboratory to establish a "platform" for collaborative science and technology projects that have the potential to benefit public health and the environment, and stimulate economic development. [Read more](#)

A study of the Pine Island Glacier, a major outlet of the West Antarctic Ice Sheet, could provide insight into the patterns and duration of glacial melt. New research by an international team including researchers from LLNL shows that this same glacier also experienced rapid thinning about 8,000 years ago. [Read more](#)

technologies as part of the Director’s Distinguished Lecturer Series. [Read more](#)

Operations

Lawrence Livermore National Security, the entity that manages LLNL for the Department of Energy, donates \$60,000 to six organizations in support of STEM (science, technology, engineering and math) education. [Read more](#)

The new Livermore Electronic Access Portal (LEAP) software application for clearance and badging services is deployed. [Read more](#)

The Lab travel policy is updated to align with current federal travel regulations and new conference management guidelines. [Read more](#)

More than 300 girls, in grades 6 to 9, have a fun-filled Saturday when they attend the Tri-Valley Expanding Your Horizons Conference on the Los Positas College campus. The annual event is geared to increase interest and foster awareness of careers in math and science. [Read more](#)

LLNL welcomes more than 90 cadets and midshipmen from the U.S. Air Force, Army, Marines, Navy and Merchant Marines for the annual Reserve Officers’ Training Corps Day. The daylong event includes a Lab overview, briefings and tours. [Read more](#)

Quotables

By looking at differences between modern DNA and ancient DNA, we may be able to better understand the evolution of diseases and that could help us better understand future disease outbreaks.

– LLNL biologist Crystal Jaing,
on the Lab’s microbial detection array
that detects plague in ancient human remains

MARCH 2014

Science & technology

Scientists who study past pandemics, such as the 14th century Black Death that devastated much of Europe, might soon be turning to an innovative biological detection technology for some extra help. The apparent first use of the technology, known as a microarray, for studying pathogens from ancient DNA, is reported by a team of

LLNL researchers have taken a peak into the lower atmospheric layers of giant gas planets such as Saturn.

scientists in the daily online journal, *Scientific Reports*. [Read more](#)

The United Nations proclaims 2014 as the International Year of Crystallography as a way to mark the 400th anniversary of Kepler's observation of symmetry in ice crystals, which sparked the wider study of the role of symmetry in matter. [Read more](#)

Students from Georgetown University's Emergency and Disaster Management program spend a week at Lawrence Livermore to learn how emerging technologies are utilized to detect and predict the effects of terrorist threats. [Read more](#)

A monthly webinar series developed by LLNL's Industrial Partnership Office tries to match the Lab's innovations with commercial partners that see a need for them in their industry. [Read more](#)

Using the VUV Free-Electron Laser (FEL) FLASH at Deutsches Elektronen-Synchrotron (DESY) in Hamburg, Germany, Lawrence Livermore researchers are part of a team that took a sneak peek deep into the lower atmospheric layers of giant gas planets such as Jupiter or Saturn. [Read more](#)

A group of women from LLNL gather to participate in a Google+ Hangout, "Find Your STEM Role Model," and Twitter chat promoting women in STEM careers. The event is hosted by NASA and the Department of Energy, who team up to address the shortage of women and girls in STEM fields. [Read more](#)

“ Quotables

Our goal is to understand how these planetary systems have developed. If Beta Pictoris b is warping the disk, that helps us see how the planet-forming disk in our own solar system might have evolved long ago.

— Lisa Poyneer,
an engineer who works in astrophysics

Lawrence Livermore scientists model actinide-based alloys, such as spent nuclear fuel, in an effort to predict the impact of evolving fuel chemistry on material performance. [Read more](#)

The Cleantech Open, the world's largest accelerator for clean technology startups, hosts a regional networking event to discuss the challenges and opportunities for investors and entrepreneurs to do business with Lawrence Livermore and Sandia national laboratories. [Read more](#)

Nearly 650 students from 72 schools participate in the Lawrence Livermore National Laboratory Alameda County Science and Engineering Fair held at the Alameda County Fairgrounds in Pleasanton.

Ionic liquids (molten salts) are important solvents in the microbial production of biofuels, but can inhibit microbial growth. Lawrence Livermore researchers discovered a resistance mechanism in a rainforest soil bacterium that enables *E. coli* to grow and produce biofuel in the presence of ionic liquids at levels that otherwise would be toxic to native strains.

NOTE

[Yellow links](#) are accessible on the Lab's internal Web network only.

[Blue links](#) are accessible on both the internal and external Lab Web network.

More than 480 separate projects are submitted by high school and middle school students from across Alameda County. [Read more](#)

New research by scientists from Lawrence Livermore, in conjunction with the Joint BioEnergy Institute, suggests that a type of bacterial resistance may provide more efficient production of biofuels. [Read more](#)

Two Lawrence Livermore scientists, who have studied the plutonium-gallium (Pu-Ga) alloy for more than a decade, confirm and explain the magnetic spin of the alloy by applying first-principle electronic structure calculations. [Read more](#)

People

Congresswoman Zoe Lofgren and members of her district office staff visit Lawrence Livermore accompanied by students and faculty from the Franklin-McKinley School District's College Connection Academy middle school. [Read more](#)

UC President Janet Napolitano pledges to expand university collaboration with the Laboratory in a Director's Distinguished Lecturer Series (DDLS) address entitled "The Stars We Ignite." Napolitano says the University of California was built on the idea of "igniting stars" through students, faculty and research. [Read more](#)

Bill Goldstein is named the director of Lawrence Livermore National Laboratory. [Read more](#)

“ Quotables

The work highlights the interdisciplinary nature of modern molecular biology, in particular, how the tools and models from mathematics and physics can help clarify problems in biology.

– LLNL physicist Ken Kim

National security expert Richard Danzig begins his Director's Distinguished Lecture Series presentation on cyber security by explaining the title he chose for his talk — "Surviving on a Diet of Poisoned Fruit." [Read more](#)

In celebration of Women's History Month, the Office of Economic Impact and Diversity at the Department of Energy (DOE), highlights the contributions of talented and dedicated employees from across the DOE complex in an online feature called "Women @ Energy: Innovators in Science, Technology, Engineering and Mathematics." Out of 170 profiles on the site, 47 of the DOE women are employees of Lawrence Livermore. [Read more](#)

Rows of wind turbines line the hills east of the Livermore Lab, a sight that has become more common across the country in recent years. Wind power saw the highest energy gains from 2011 through 2013, according to the most recent U.S. energy flow charts released by Lawrence Livermore National Laboratory.

NOTE

MAY 2014

Science & technology

Element 117, first discovered by Lawrence Livermore scientists and international collaborators in 2010, is one step closer to being named. The existence of element 117 and its decay chain to elements 115 and 113 are confirmed by a second international team led by scientists at GSI Helmholtz Centre for Heavy Ion Research, an accelerator laboratory located in Darmstadt, Germany.
